PROJECTS

Employee Management System: | Java, Spring Boot, React.js, MySQL, Postman

- Designed and developed a role-based system where Admin can perform full CRUD operations on employee records, while users can register, log in, and view employee data.
- Built RESTful APIs with Spring Boot for secure user authentication and employee management; validated and tested endpoints using Postman.
- Created a responsive React.js frontend for registration, login, and an employee dashboard connected to a MySQL backend.

Diabetes Prediction using ML and IoT | Python, Machine Learning, IoT Sensors |

- Built a machine learning model to detect diabetes and classify it as Type 1 or Type 2 using patient data from IoT sensors.
- Processed real-time health metrics and applied classification algorithms to enable accurate, early diagnosis in healthcare applications.

AR Management Tool | React.js, Node.js, Express.js, MongoDB

- Built an Accounts Receivable management system for an RCM company, including modules like Active/Inactive Claims, Payments, Users, and Dashboards.
- Fetched claim data from the clearinghouse through APIs and displayed it in the UI using dynamic tables and dashboards.
