## PROJECTS

### •Voting Web Portal Using Django

A secure and user-friendly web application that allows users to register, log in, and cast their votes electronically with real-time result tracking

### •Scalable Web Hosting Architecture on AWS

Designed and deployed a highly available and scalable web hosting environment using Amazon EC2, S3, RDS, and Load Balancer. Implemented auto-scaling and monitoring with CloudWatch for performance optimization and fault tolerance.

### •Recipes Finder Using Flask

Developed a web application using Flask that allows users to search for recipes based on ingredients. Integrated external APIs and implemented a clean, user-friendly interface for an enhanced cooking experience.

### •Expense Tracker – Using Python

Built a Python-based expense tracker to help users log, categorize, and monitor their daily spending. Included data storage using CSV and basic data analysis for budgeting insights .
