PROFESSIONAL SUMMARY

Skilled Software Engineer with 2+ years of experience in development, production support, operations management. Proficient in automating workflows, troubleshooting, system optimization, and providing comprehensive support for critical software systems. Seeking to leverage technical expertise and problem-solving abilities to contribute in developing applications.

WORK EXPERIENCE

ValueLabs, Hyderabad

Dec.22– Present

Senior Software Engineer Specialist

- Managed end-to-end application support for high-priority enterprise systems, ensuring 99.8% uptime.
- Developed and implemented automated scripts for system maintenance tasks (e.g., server health checks, backups, deployments), improving operational efficiency by 20%
- Worked on web automations using python selenium which can reduce manual intervention.
- Utilized monitoring dashboards like Dynatrace, new relic to visualize logs in real-time, assisting in proactive system monitoring and quickly isolating issues such as database connectivity problems, or API timeouts.
- **Achievements**
 - Star of the Month Award – Recognized for exceptional performance in the projects.

KEY SKILLS

Programming Languages: Java, Python, C, Spring Boot.

Cloud Technologies: AWS

Operating Systems: Linux, Windows

PROJECTS

- **GenAI App with Java and Spring Boot**

A chatbot-type setup where you use Spring Boot to create a backend that integrates with a Generative AI model – Gemini API. The user interacts with the system via simple HTTP requests, and the AI model provides dynamic responses based on the user's input.

- **SliceBill - Pizza Bill Generator Application**

Developed a Pizza Bill Generator application using Java and Object-Oriented Programming (OOP) principles to calculate and display the cost of a pizza order based on user-selected options.

EDUCATION

Bachelors Of Technology in ECE | CGPA: 8.3

June 2023

CMR Institute of Technology, Hyderabad
