## Projects

**The Newsmania – A Smart News Aggregator**

**January 2025**

Technologies Used :

- **HTML, CSS, JavaScript, Python**

Discription:

- Newsmania is a web-based news aggregation platform that collects and displays headlines from multiple sources in one place, streamlining the news reading experience. It offers categorized news sections, a Machine Learning-based Fake News Detection Module, and quick access to emergency helpline numbers. The frontend is built using HTML, CSS, and JavaScript, while PHP and XAMPP are used on the backend to handle user authentication and store login details. This project focuses on improving accessibility, user trust, and time efficiency in digital news consumption.

**Quiz Application-Simple Minds**

**June 2021**

Technologies Used :

- **Core Java , Swing , AWT**

Discription:

- The application features a user-friendly interface allowing users to participate in timed quizzes. Each quiz question presents multiple options, with users having 15 seconds to select the correct answer. A unique feature allows users to strategically block two incorrect answer choices for a single question, enhancing their chances of success. Upon completion, the application calculates the user's score based on the number of correctly answered questions.
