ACADEMIC PROJECT

Road Accident Analysis and Prediction using Machine Learning

Developed a machine learning-based system to analyze road accident data and predict accident-prone areas across India. The system integrates various factors such as time, weather conditions, and road type to identify statistically significant contributors to accidents.

Achievements/Tasks

- **Skills:** Machine Learning, Python, HTML, CSS
- **Outcome:**
 - Achieved **90%+ accuracy** in predicting accident severity.
 - Identified key factors such as road type, weather conditions, and time as primary contributors to accidents.
 - Mapped **high-risk zones** to improve targeted safety measures and urban planning.
 - Provided **data-driven safety recommendations** (e.g., road infrastructure improvements, better signage, and weather-specific alerts).
 - **Future Enhancements:** Enable **real-time analysis and reporting** of accident trends for faster decision-making. **Facilitate collaboration with local authorities** by sharing predictive insights to implement preventive measures effectively.
