PROJECTS

Online Food Ordering System

Tech Stack: Angular, Spring Boot, PostgreSQL, Spring Security, JPA

- Developed a scalable full-stack web application where users can browse food items, add them to a cart, and place orders online, while admins manage the menu and update order statuses in real-time using Angular (frontend) and Spring Boot (backend).
- Built secure RESTful APIs with Spring Boot, integrated JWT-based authentication and role-based access control using Spring Security, managed relational data with JPA and PostgreSQL, and implemented real time data updates with Angular HttpClient and reactive UI components.

ATM Simulator System

The ATM Simulator System is a desktop application that allows users to perform essential banking operations like login, balance inquiry, cash withdrawal, and deposit.

- Developed using Java with a Swing-based GUI, it integrates with MySQL/PostgreSQL for secure account and transaction management.
