📅 2016 - 2017

## PROJECTS

### EVENT MANAGEMENT SYSTEM

The Event Management System is a web-based application designed to manage events, including registrations, login, and password management. The system allows users to create an account, register for events, and manage their profiles. The application also includes features for event organizers to manage events, including creating, editing, and deleting events

- **Key Features**: User registration and login system Event registration and management Profile management for users Password management, including forgot password and reset password features Event creation, editing, and deletion for event organizers Customizable event packages and pricing.
- **Technical Details**:The application is built using Java, HTML, CSS, and JavaScript The backend is powered by Java Servlets and MySQL database The frontend uses Bootstrap for responsive design and jQuery for dynamic effects The application is deployed on a web server and accessible through a web browser.
- **Java programming language**: Web development using HTML, CSS, and JavaScript Database management using MySQL Servlets and Java-based web development Bootstrap and jQuery for frontend development Project management and organization.

### PASSWORD GENERATOR

Password Generator web application that allows users to create secure passwords with customizable options.

- The application features an intuitive user interface where users can select the desired password length (ranging from 6 to 20 characters) and include numbers, special characters, and uppercase letters. The password is generated using JavaScript and displayed dynamically on the screen.
  The project showcases proficiency in HTML, CSS, and JavaScript,

**Core java**  **Advance java**  **Spring**

**SpringBoot**  **BootStrap**  **Html**  **Css**

**Javascript**  **React JS**  **Sql**  **Java8**

## EXPERIENCE

### Full Stack Java Developer Intern
**Pentagon Space**
📅 2024 - 2025  📍 Bangalore

As a Java full stack developer intern  at Pentagon Space, I had a great learning and working experience.

- Gained hands-on experience in full stack development using Java technologies.
- Worked extensively with **Core Java**, **JSP**, **Servlets**, **Spring**, and **Spring Boot** for backend development.
- Developed dynamic and responsive web applications using **HTML**, **CSS**, **JavaScript**, and **React.js**.
- Performed database operations and queries using **SQL**.
- Collaborated with team members in an agile environment, enhancing both technical and communication skills.
- Successfully contributed to end-to-end application development, debugging, and deployment processes.
